

PRODUCT OVERVIEW

WiFi & Networking

Business WiFi built around your building, your people and the way they actually work.

Communications, IT & Cybersecurity.
Business Technology, Made Simple.

Coverage Where You Work

Coverage is designed for the whole of your building, so the signal reaches the loading bay, the back office and the mezzanine, not just the desks nearest the router.

One Network, One Supplier

Broadband, switching and WiFi are designed as one system by one company, so when something stops working there is one number to ring and nobody to pass it to.

Capacity for a Full Building

Business grade access points carry phones, laptops, tablets and handhelds at the same time, rather than slowing to a crawl when everyone logs on at nine in the morning.

Room to Grow Into

Managed switches and the Omada platform leave headroom, so adding a camera, a door entry panel or more devices later is a change to the network, not a rebuild of it.

We survey the site first and design the network around what we find. This is what goes in, and who runs it.

WiFi Access Points

TP-Link Omada access points, positioned around how each area is used, helping reduce weak spots indoors and outdoors where needed.

Managed Switches

Managed switches connect key equipment and can power compatible phones and access points over the same cable, so there is less to wire.

A Router Sized for the Site

The router is specified for the building and the number of users, so the wired and wireless sides are designed and managed as one network.

Monitored and Supported by Us

Your router, switches and access points sit in one Omada dashboard, so we can spot problems early, apply updates and make changes without visiting site.

A Separate Guest Network

Visitors get straightforward internet access on a separate guest network, helping keep guest traffic away from your business systems.

Social WiFi & Data Capture

An optional addition. A branded guest login captures customer details for export to compatible CRM tools. Marketing follow-up requires consent.

CUSTOMER STORY

“Now that we have WiFi everywhere, our facilities are used in many more ways; it’s fantastic. Reliable coverage throughout the venue has given us much more flexibility in how we use the space, and we no longer have to think about whether the connection will reach.”

Oliver Hutley, Director
Gate Street Barn

NEXT STEP

Book a Site Survey

We walk the building with you, count the access points properly and give you the design and the price before anything is ordered.
