

We specialise in installing and maintaining first class telephone solutions for care and rest homes all over the UK. Our close relationship with the National Care Association means we can offer members extremely cost efficient solutions.

WiFi coverage.

A strong WiFi signal has never been more crucial given that residents care plan information is now updated on tablets and mobile devices.

Small, effective, and discreet WiFi access points are strategically placed throughout the home, so that your team can utilise your high-speed internet connection from anywhere in the home.

The right handsets.

We understand how crucial it is that your handsets are durable enough to handle the daily activities within the home. In order to meet the demands of our customers, we are continually studying the best devices on the market, whether you need phones that are more appropriate for an office setting or handsets that are more sturdy and durable.

Cordless phone coverage.

Ensuring your staff can be reached at all times is paramount. More often than not, most care homes that we speak to are based in older buildings with thicker walls that present issues for cabling and coverage.

F One can install a Mesh WiFi Network which is a wireless solution that provides consistent connectivity for internet and phone services in every part of the building. Enjoy the efficiency that comes with being able to reach colleagues at all times.
