

Our Industries. Education.

As a certified supplier for Hampshire County Council, we help many schools and trusts transition from traditional ISDN phone systems to modern, cloud-based alternatives.

Cordless Phone Signal.

Using existing robust WiFi networks in schools, we offer cordless handsets to provide unmatched flexibility for teaching and administrative staff.

Reporting Child Absences.

We work with your IT provider to set up a dedicated email account for reporting student absences and configure the phone system to guide parents efficiently. The system will provide clear instructions, such as “press one to report an absence.” Callers can leave a voicemail with the student’s name and reason for absence. This approach allows the reception team to manage phone lines efficiently, addressing absences and changes to school collection at a convenient time.

“Our local authority recommended a quick switch from our ISDN system to a cloud-based solution. F One was their suggestion, and they exceeded our expectations. They managed the transition seamlessly and without complications. We provided a brief, and they executed it perfectly.”

Lockdown Tannoy.

Understanding the need for immediate lockdown procedures in schools, our system allows for quick and efficient announcements to all handsets on-site at the press of a button.
