

Our Core Products. IT Security.

We're dedicated to boosting your security with top-notch IT products tailored to your needs. If you're worried about losing important files, whether they're accidentally deleted or targeted by cyber criminals, we've got you covered.

Microsoft 365.

Let F One manage your Microsoft 365 account and licenses, giving you the freedom to focus on what truly matters... your business. With us at the helm, you can concentrate on your core tasks while we handle the nitty-gritty details of your account.

Spam Filtering.

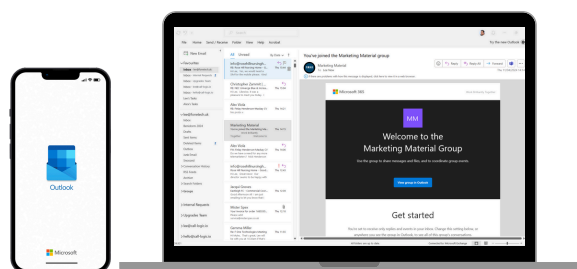

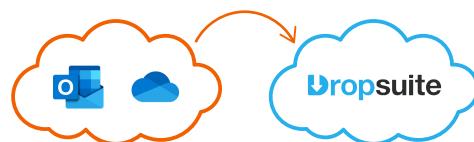

Even if you're good at spotting a potential spam email, not everyone on your team could be. One harmful email could lead to huge data loss and other serious consequences. Protect your company by implementing our advanced email spam filter, which blocks spam at the source and significantly reduces the volume of emails your team handles.

Microsoft 365 Backup.

Did you know that Microsoft 365 doesn't have a built-in backup? If someone accidentally or, worse still, intentionally deletes files, your emails and SharePoint documents could disappear instantly.

That's why we've partnered with Dropsuite to offer a straightforward backup service. It automatically saves all your Microsoft 365 data in the cloud, ensuring your information remains safe and secure, no matter what happens.

Microsoft 365 Backup

Antivirus Protection.

We've made our security system stronger by adding top-notch antivirus features from SentinelOne. This smart technology finds and stops harmful stuff like ransomware and tricky cyber attacks before they can cause trouble. Plus, the system jumps into action all by itself when it spots a threat, so everything keeps running smoothly without any hassle.
